

# Practice

1a

Complete the steps to find the area.

1.

$$A = l \times w$$

$$A = \underline{\hspace{2cm}} \times \underline{\hspace{2cm}}$$

$$A = \underline{\hspace{2cm}} \text{ square centimeters}$$

2.

$$A = l \times w$$

$$A = \underline{\hspace{2cm}} \times \underline{\hspace{2cm}}$$

$$A = \underline{\hspace{2cm}} \text{ square feet}$$

**HINT** In a square, length = width.

Find the area.

3.

REMEMBER Area is expressed in square units.

4.

5.

Complete.

6. If the length of a rectangle is 11 centimeters and its width is 4 centimeters, its area is

\_\_\_\_\_.

7. If the length of a rectangle is 9 feet and its width is 8 feet, its area is

\_\_\_\_\_.

8. If the side of a square is 15 inches, its area is

\_\_\_\_\_.

$$A =$$

$$56 = 8 \times w$$

Use fact families to rewrite equation.  
 $56 \div 8 = \underline{\quad}$

Find the missing measure.

9.

$$w = \underline{\quad}$$

10.

$$s = \underline{\quad}$$

11.

$$l = \underline{\quad}$$

Choose the best answer.

12. A rectangular tablecloth measures 5 feet by 7 feet. What is the area of the tablecloth in square inches?

- A. 5,040 square inches
- B. 144 square inches
- C. 35 square inches
- D. 24 square inches

13. A rectangle has an area of 80 square inches. Which of the following could **not** be the dimensions of the rectangle?

- A. 4 inches by 20 inches
- B. 5 inches by 16 inches
- C. 6 inches by 15 inches
- D. 8 inches by 10 inches

Solve.

14. Fabio is putting carpet in his bedroom which measures 12 feet by 13 feet. How many square feet of carpeting does he need?

\_\_\_\_\_

15. The area of a square quilt is 49 square feet. What is the length of a side of the quilt in inches?

\_\_\_\_\_

16. **PREDICT** What will happen to the area of a rectangle if the length of the rectangle is doubled? Justify your answer.

\_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

17. **WRITE** Tara is arranging 16 squares of felt into rectangles. In how many different ways can she arrange the pieces of felt? Explain how you found your answer.

\_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

## Applying Area

The **area (A)** of a plane figure is the number of squares having a side length of 1 unit that can completely cover the inside of the figure with no gaps or overlaps. Area is measured in **square units**. You can use a formula to find the area of a rectangle.

**EXAMPLE** Find the area of the rectangle shown below.

1

Use the formula for the area of a rectangle.

$$\text{Area} = \text{length} \times \text{width}$$

$$A = l \times w$$

2

Multiply the length times the width.

$$l = 6 \text{ inches and } w = 5 \text{ inches}$$

$$A = 6 \times 5$$

$$6 \text{ inches} \times 5 \text{ inches} = 30 \text{ square inches}$$

► The area of the rectangle is 30 square inches.

MODEL

Model 30 square units on the rectangle below.

## Problem Solving

### READ

The area of a PC tablet is 70 square inches. The length of the tablet is 10 inches. What is the width of the tablet?

10 in.

### PLAN

Use the formula for the area of a rectangle.

$$A = l \times w$$

### SOLVE

$$A = l \times w$$

$$70 = 10 \times w$$

$$w = \underline{\hspace{2cm}}$$

### CHECK

Check by multiplying.

$$10 \times 7 = \underline{\hspace{2cm}}$$

→ The width of the tablet is 7 inches.
